## **DETAILED ACTION**

### **Reason for Allowance**

The prior art doesn't anticipate the method or suggest the novelty of the claimed invention.

Closest prior art Sneddon et al., WO 01/87849 teach identified compounds which are modulators of TNF of signaling and methods of use thereof for treating a TNFa mediated condition in a subject. Applicant has unexpectedly discovered that the compounds of the instant claims act synergistically with certain known immunosuppressive drugs to enhance the activity of these drugs. Example 1 demonstrates that compound 1 in combination with Rapamycin, administered for 14 days following surgery, resulted in a 100 % graft survival for over 100 days in comparison to Rapamycin alone which only showed a modest two to three week delay in the rejection. It is also noted that the dose of Rapamycin used in Example 1 in combination with compound 1 was ten times lower than typically used to suppress transplant rejection (see page 22, lines 22-24) of the specification.
